Inh-A	245.3	pg/ml	1.23	Corr. MoM		

Tr.21 risk

at term

1:1544

Age risk at term

1:284

Down's Syndrome Risk

The calculated risk for Trisomy 21 is below the cut off which represents a low risk.

After the result of the Trisomy 21 test it is expected that among 1544 women with the same data, there is one woman with a trisomy 21 pregnancy and 1543 women with not affected pregnancies.

The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!

Risk for trisomy 18
The calculated risk for trisomy 18 is < 1:10000, which indicates a low risk.
