Down's	Syndror	ne Risk							
The calculated risk for Trisomy 21 is below the cut off which represents a low risk. After the result of the Trisomy 21 test it is expected that among 1908 women with the same data, there is one woman with a trisomy 21 pregnancy and 1907 women with not affected pregnancies. The HCG level is high. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!									
Neural tube defects risk					Risk for trisomy 18 The calculated risk for trisomy 18 is < 1:10000, which				
The corrected MoM AFP (1.57) is located in t risk area for neural tube defects.				ated in the IOW	The calculated ris indicates a low ris		isomy 1	δ IS < 1:10000, WNICh
