Down's	Syndror	ne Risk							
The calculated risk for Trisomy 21 is below the cut off which represents a low risk. After the result of the Trisomy 21 test it is expected that among 4135 women with the same data, there is one woman with a trisomy 21 pregnancy and 4134 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!									
Neural tube defects risk					Risk for trisomy 18				
		M AFP (1. al tube de		ated in the low	The calculated ris indicates a low ris		isomy 18 is < 1:10000, which
