After the	result of th	ne Trisomy	21 test it	t is expected that am	ong 6473 women wit			, there is one woman	
with a trisomy 21 pregnancy and 6472 women with not affected pregnancies.									
The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!									
					C C				

Neural tube defects risk	Risk for trisomy 18
The corrected MoM AFP (1.37) is located in the low risk area for neural tube defects.	The calculated risk for trisomy 18 is < 1:10000, which indicates a low risk.
