After the with a tris	result of th somy 21 p ulated risk	ne Trisomy regnancy by PRISC	y 21 test it and 4143 A depend	below the cut off we is expected that amount women with not affected to the accuracy of tatistical approaches	ong 4144 women with cted pregnancies. the information provi	h the sa ided by	me data the refe	a, there is one woman rring physician.
Neural tube defects risk					Risk for trisomy 18			
The corrected MoM AFP (1.24) is located in the low risk area for neural tube defects.					The calculated risk for trisomy 18 is < 1:10000, which indicates a low risk.
